

16 SEP 2019

B.Sc. Semester-VI Examination
Code^o - 21837
English

Time: 2.30hrs]

[Marks: 70

1. Describe the murder of the old man leading to the narrator's guilty conscience and confession of the crime. (14)

OR

Discuss the story *The Tell-Tale Heart* illustrating the failure in emotional intelligence.

2. What was the bet between the banker and the lawyer? Comment on its outcome stressing the lawyer's adaptability to the challenge. (14)

OR

Write short notes:

- i) The solitary confinement of the lawyer
ii) The lawyer's letter
3. Explain any two of the following: (14)
i) The concept and significance of presentation
ii) Knowledge of Environment and audience analysis in presentation
iii) How to prepare the text for presentation
4. Write short notes (any two): (14)
i) Importance of interview
ii) Purpose of Group discussion
iii) Tips for the success of group discussion
- 5 a) Draft an application for the post of a Medical Representative OR a Laboratory assistant in a Science college. (07)
b) Make notes of the following passage giving it a suitable title: (07)

The moon looks large, bright and beautiful in the night sky. Yet it is very small compared with the earth. It is only about a quarter of its size. You could put nearly four moons, side by side, across the middle of the earth. If the earth was empty, you could get fifty moons inside it. You would have to press them out of shape to get them in.

The moon measures about 3,360 km through the centre. The sun and the moon look the same size. But they are not. Across the middle of the sun you could put 400 moons, side by side.

The earth is 81 times heavier than the moon. But the sun is 27 million times heavier than the moon.

The moon looks big in the sky. This is because it is much closer to us than anything else in the sky. It is about 384,000 km away. In astronomy this is a very short distance. The moon is our nearest neighbour. Suppose an aero plane flew round the equator of our earth ten times. From the earth to the moon is a shorter distance. Our next nearest neighbor is the planet Venus. Venus is over 41 million km away.

A second name for the moon is satellite and so the moon is earth's satellite. The earth is a planet. Some planets have a number of satellites. In fact, there are only three planets without satellites. They are Mercury, Venus and Pluto.
